Meeting 3

Team member: Xin Shen   Uid:u6498962
Team member: Shaocong Uid:u6499863
Time: 2020.5.25
Method: ZOOM
Duration: 3 hours

Meeting content:

1. Check all the default functions.

Through manual testing, we have basically completed all the default functions. But there are still some bugs, such as the system crashing after saving customer information. We need to conduct more tests to find these bugs and try to solve them.

2. Identify some styles and pictures.

Illustrations are used in many places in the program, such as the image of the loading page and the image of the app logo when the app is opened. We found some suitable pictures to make the app more beautiful. And some styles and colors in the app have been unified.

3. Check advanced features.

Due to the issue of time, we have only completed the required advanced features, such as the client setting his own time and deleting the meeting with multiple choices. We want to finish as much as possible for other advanced ones we want.

4. Program testing.

This assignment requires us to test 80% of the program. Due to time issues, we performed a division of labor, writing each other's program tests, looking for bugs and modifying them when testing the program.

Future plans:

We are preparing to submit a meeting in order to check all our functions, tests and all documents that need to be submitted.
